

# Drive more Revenue with ATM+

Searching for creative ways to maximize the value of your existing ATM fleet? With ATM+ software from Kahuna you get the most value out of your network by offering new ATM products to make your business the most successful it can be.

## **Dynamic Currency Conversion (DCC)**

Allows ATM operators to convert the total withdrawal amount into foreign cardholders' currency. The cardholder knows the exact total in their own currency at the time of withdrawal. The ATM provides cardholders with clarity of exchange rate and displays both local and cardholder currency amounts on the screen. By performing the currency conversion at the acquired end, the ATM operator earns additional revenue that the issuer would normally make on the transaction.

## **Better Balance Inquiry**

Prompts the cardholder for balance inquiries in a manner that produces a higher number of balance inquiries.

## **International Revenue Segmentation**

Ability to increase the revenue in the event a non-US cardholder elects to withdraw funds from the ATM.

## **Credit Card Revenue Segmentation**

Ability to increase the revenue in the event a customer elects to withdraw funds from their credit card.

## **Active/Active**

All but eliminates downtime as the systems are both processing transactions with the ability to move terminals between platforms.
